X · INTELLECT IN CONTINUITY · ROUND 1

Built so that confidence is **earned at each step**

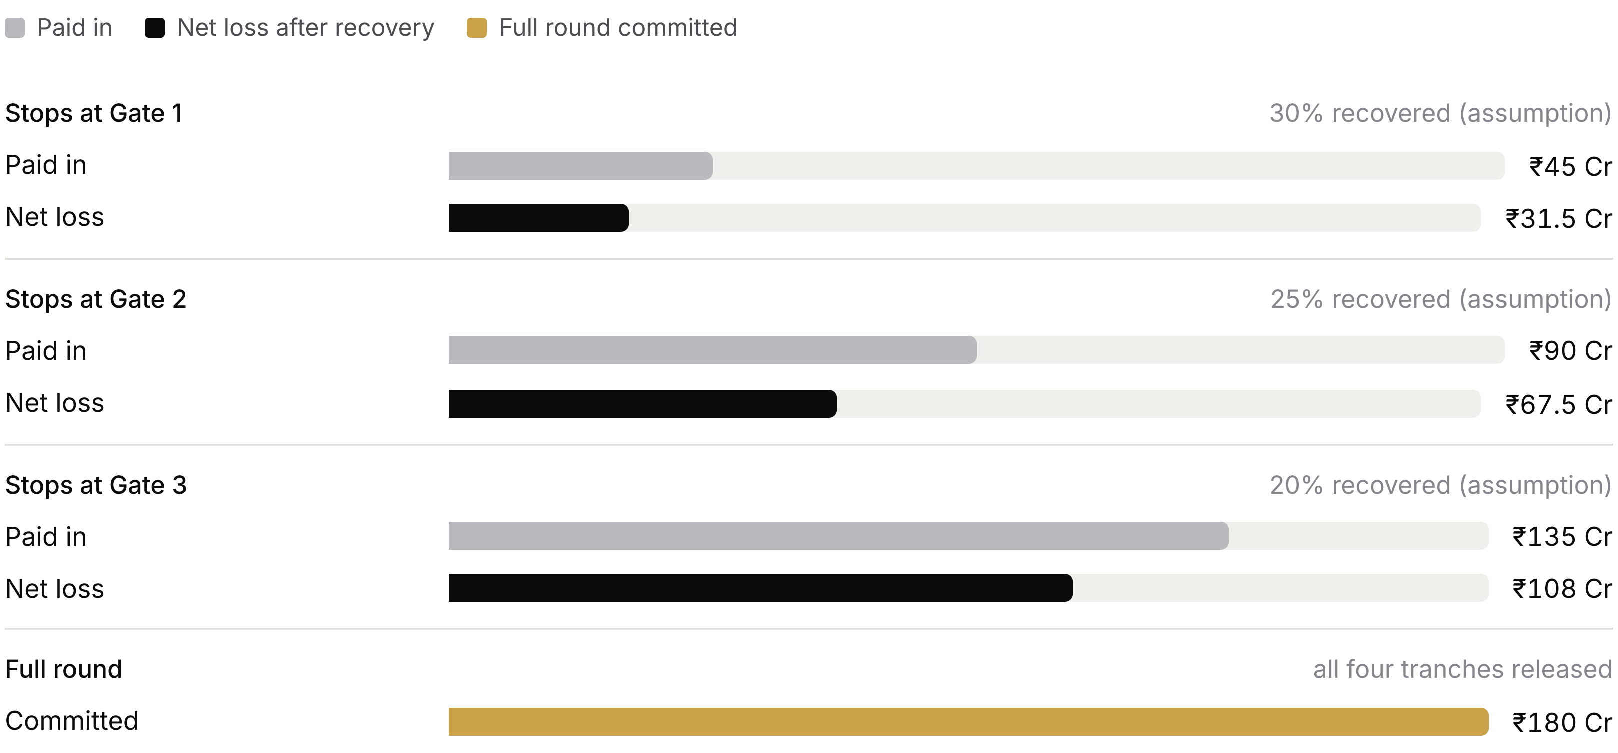
₹180 Cr for 3.0% of X at a ₹6,000 Cr post-money. The money moves in four gated tranches, the odds are shown, and every claim states how sure we are.

₹180 Cr	3.0%	₹6,000 Cr	4 gates
Round 1 (≈ US$20 mn)	new-investor stake	post-money (≈ US$0.67 bn)	₹45 Cr released on each

1 · CAPITAL AT RISK

If Gate 1 fails, the loss is **₹31.5 Cr**, not ₹180 Cr

Each tranche is released only after an independent Scientific Advisory Board confirms the gate. A 1x preference and wind-down recovery limit what is lost when the venture stops.

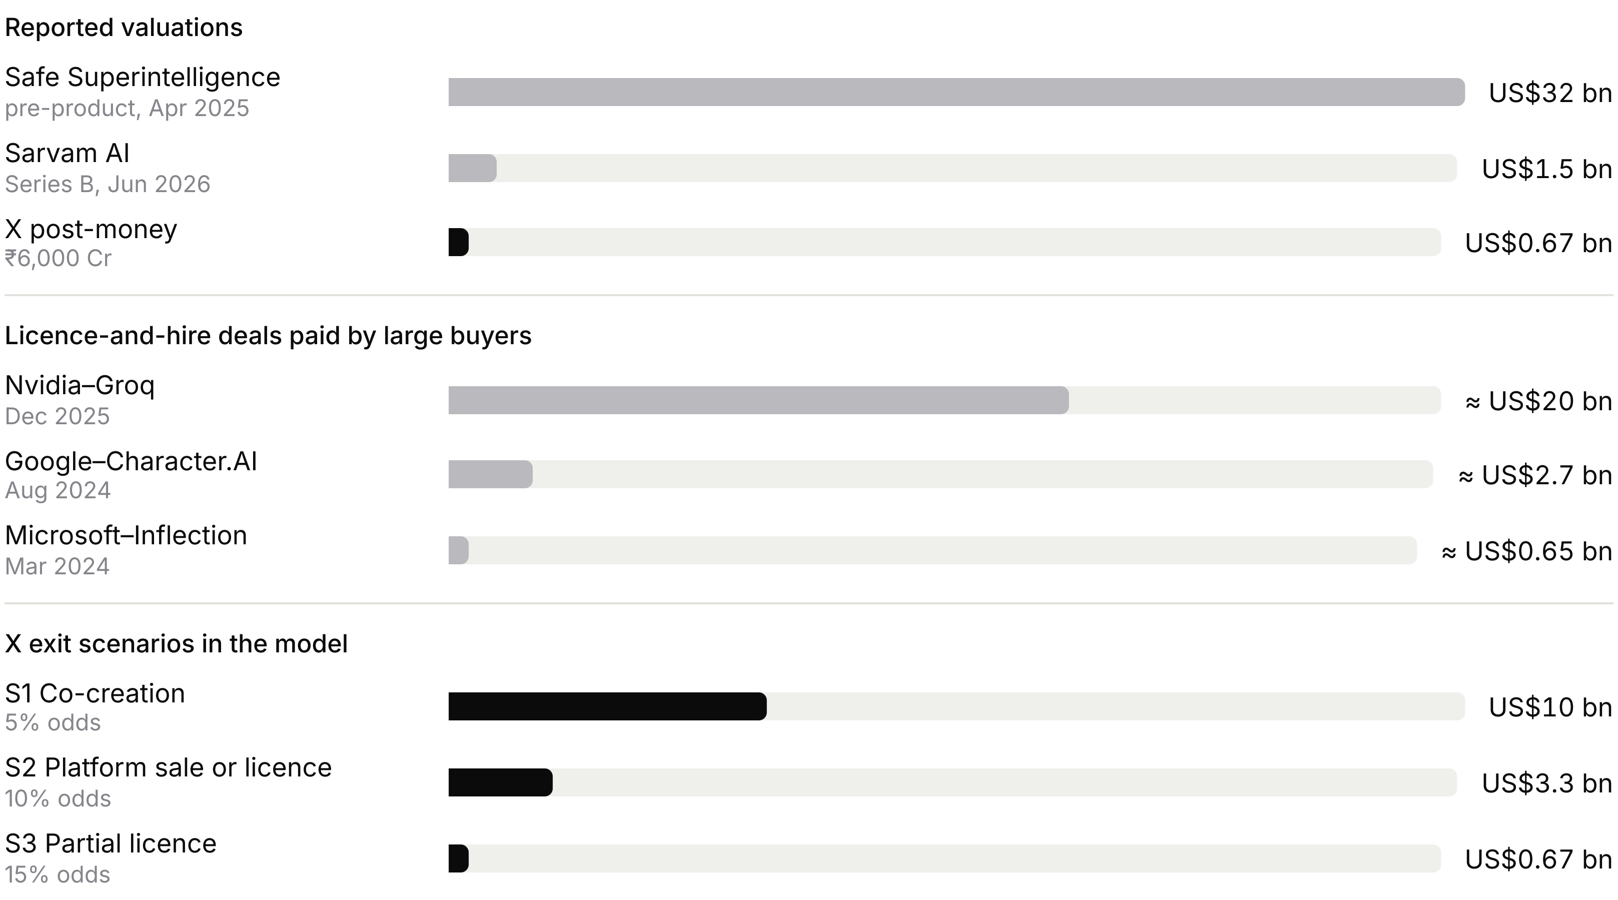


17.5% of the round is exposed at Gate 1. Recovery rates of 30%, 25% and 20% are assumptions.

2 · PRICE AGAINST THE MARKET

X is priced at **44%** of India's lead sovereign-AI company, with exit scenarios inside the range large buyers have paid

Three groups on one scale, in US$ billion. Grey bars are market reference points; black bars are X. The three exit scenarios sit inside the range large buyers have paid for technology and teams, well below the top of it.

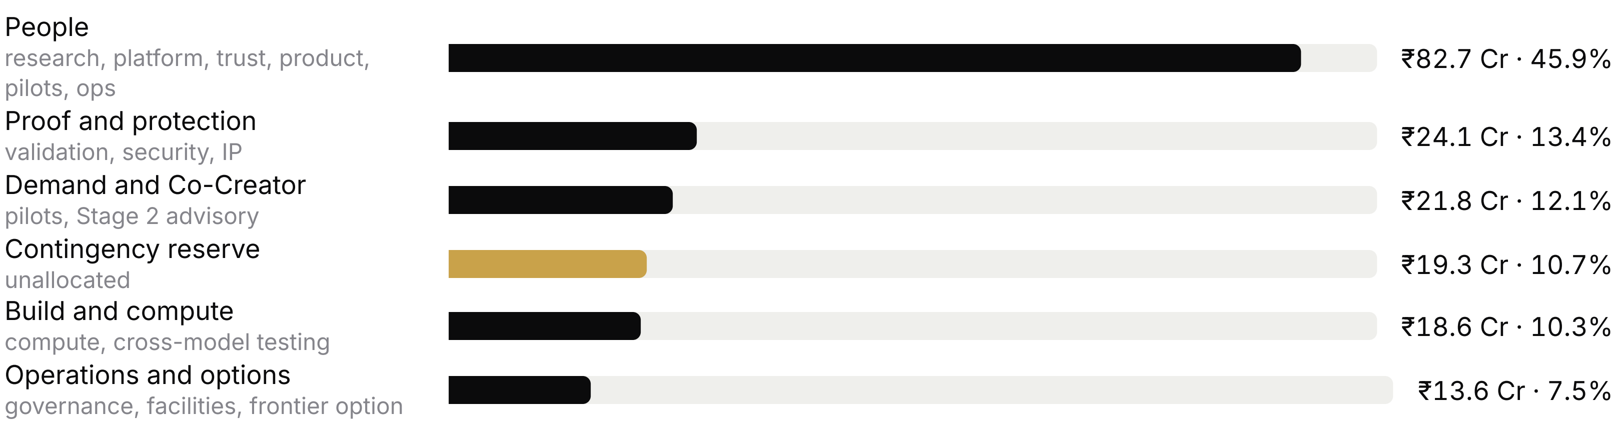


Press-reported figures, not company-confirmed. FX ₹90 per US$ is an assumption. Sources are listed below.

3 · USE OF FUNDS

Nearly half funds the team. A **10.7% reserve** stays unallocated

All 16 quarters are funded from this round with no revenue assumed. Compute is deliberately modest because X is a model-agnostic layer, not a model. The founder allocation is still to be set and will draw on the reserve.

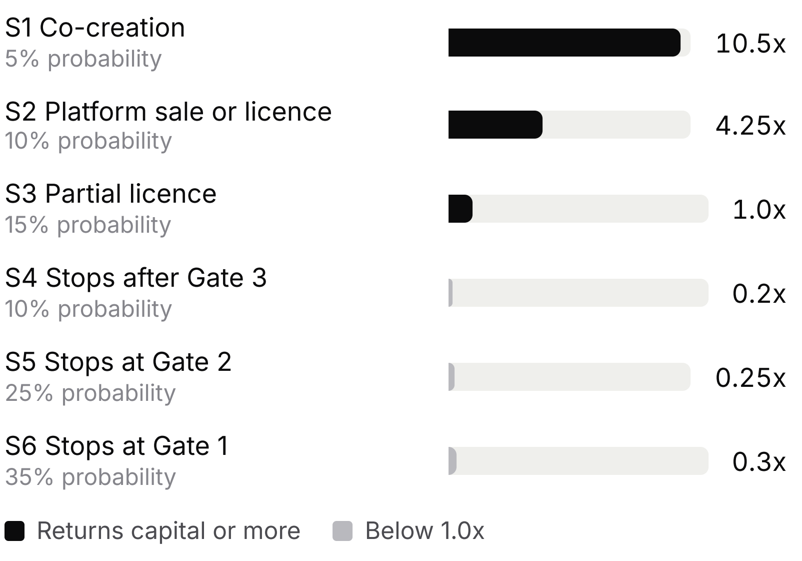


4 · THE ODDS ARE ON THE PAGE

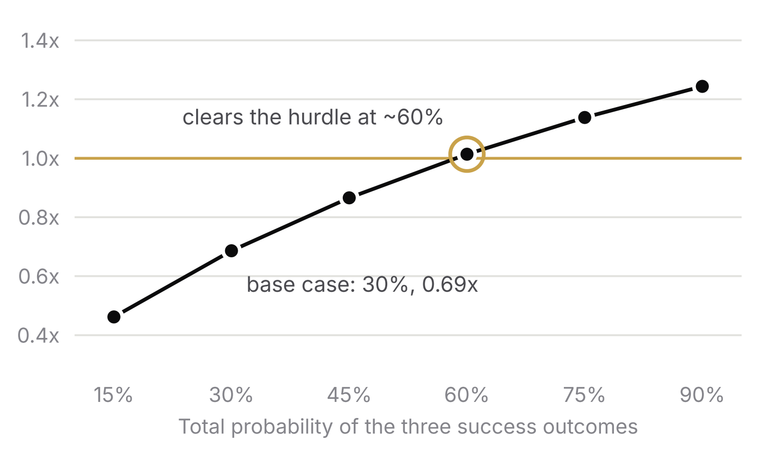
Best case **10.5x**. Expected **2.0x**. We show what an investor must believe

Six outcomes with placeholder probabilities. The right-hand chart shows how likely success must be before ₹6,000 Cr clears a 30% hurdle. An investor can replace every number in the model.

Return multiple by outcome



Hurdle-adjusted index vs success odds



Above 1.0x the price clears a 30% hurdle. Gold line marks 1.0x.

Probabilities and exit values are illustrative judgements, not derived from the Frozen Core.

5 · CALIBRATED HONESTY

Twelve claims, each with its state. **None is yet demonstrated**

The Canon's Truthiness rule applied to the raise. Gate 1 is built to turn five of these into tested results.

0 Known / Demonstrated **3** Inferred **5** Assumed **3** Uncertain **1** Disputed

INFERRED Capability is becoming abundant	**INFERRED** Continuity gap across vendors	**ASSUMED** GATE 1 Identity can be specified and ported
ASSUMED GATE 1 Calibration beats strong baselines	**ASSUMED** Enterprises will pay	**INFERRED** GATE 1 Fit with India's DPDP Act
UNCERTAIN A Co-Creator will engage	**DISPUTED** ₹6,000 Cr is supportable	**ASSUMED** Super Intellect horizon is reachable
UNCERTAIN Quantum speeds the path	**UNCERTAIN** GATE 1 The IP is defensible	**ASSUMED** GATE 1 Team delivers inside ₹180 Cr

States are proposed and need the founder's confirmation. Each claim also has a stated limit, counter-lens and falsifier in the model.

6 · SAFEGUARDS

Six protections written into the term sheet

Tranches on verified gates Four ₹45 Cr releases. An independent Scientific Advisory Board confirms each gate before funds move.	**1x liquidation preference** CCPS rank ahead of common. A ₹6,000 Cr partial exit still returns capital.	**Earned price option** Step the price ₹3,000 / 4,500 / 6,000 / 6,000 Cr, or reset it if a gate is missed.
Reserved matters Investor consent to sell or license core IP, new shares, related-party deals and budget overruns above 10%.	**IP held and escrowed** All IP assigned to the company. Specification and code held with an independent agent.	**Quarterly Truthiness report** Every claim, its state and its falsifier, updated each quarter and sent to investors.

Proposed terms. Counsel to settle all of them.

Draft for founder review. Confidential. Not an offer of securities. All figures from X_Round1_Financial_Model.xlsx; probabilities, costs and exit values are assumptions.
